

The 2P Box

Collapsible and reusable packaging

We meet your needs

Simple, fast and strong are the keywords for the 2P box

The patented 2P box consists of a base and only two loose parts, the top and the front. Hereby the name 2P - 2 pieces. The 2P box is developed to serve high frequency of use and speed of turnaround in demanding industries.

The 2P box facilitates rapid assembling and dismantling, optimising the process for packaging and shipping. At the same time the 2P box is strong and flexible allowing even heavy items to be transported.

The 2P box can be stacked in storage or it can be flatpack with up to 80% volume reduction. This saves costs in return shipment or space in storage.

About the 2P box

- Only two loose parts
- Assembled and collapsed by one person in less than 25 seconds
- Offers up to 80% volume reduction saving space and return costs
- Designed for LEAN manufacturing
- Serves high speed turnaround industries

The box is held together with strong spring steel clips. The clips are easy to open with e.g. the clip tool.

The spring steel clips are retained in position making fitting and removal of the clips fast and easy.

The box of opportunities - large and small

Whether you want to ship glass, fragile parts, odd size items etc. we take your special needs into account. This will help you to optimise your manufacturing process.

- The 2P box keeps the items in position while giving you full access to the parts.
- Special blocks absorb shock and vibration so fragile parts arrive safely.
- The 2P box is designed to meet your requirements for shipping and packaging.

- 2P boxes can be designed with shelves, divided rooms etc. to handle smaller parts.
- To protect parts against dust, the surface of the 2P box can be film-coated.
- The dunnage ensures cost-effective packaging. We offer dunnage variations including foam, steel constructions, plywood etc.

- With specially designed dunnage you can transport fragile parts without the risk of damage, scratches etc.
- With a textile rack the parts do not need extra wrapping
- The 2P box is strong and versatile and can be stacked up to four high.
- We take your special needs into account.

Even large and odd size boxes fold into pallet size.

The design of the box makes it easy to handle large items. Despite the size they can still be stacked in storage.

Clip-Lok Group

The Clip-Lok Group is a global network of packaging companies that cover marketing, sales, client liaison and manufacturing on five continents.

We manufacture cost-saving, reusable packing systems, custom made for each assignment. The system is carefully managed by our engineers in cooperation with our customers, and we are dedicated to protecting the environment by using environmentally friendly materials and by manufacturing reusable boxes.

Our high quality Clip-Lok boxes can be used time and again. They are tested and built to withstand vibration, stacking, impact and pressure. Goods shipped in a Clip-Lok box are well protected.
