

Product: Reusable Clip-Lok transport box for antenna system

- Specifications:**
- The Clip-Lok box is designed to carry a large and complete antenna in one box.
 - The antenna is made up with 33 separate parts of differing sizes and shapes.
 - Plywood and foam dunnage keep the parts separated and securely loaded. They are protected from damage, including the painting and sensitive surfaces.
 - The Clip-Lok box and dunnage is quick and easy (with correct tool which is supplied with the box) to erect or dismantle for loading or unloading the antenna to ensure the ease of use.

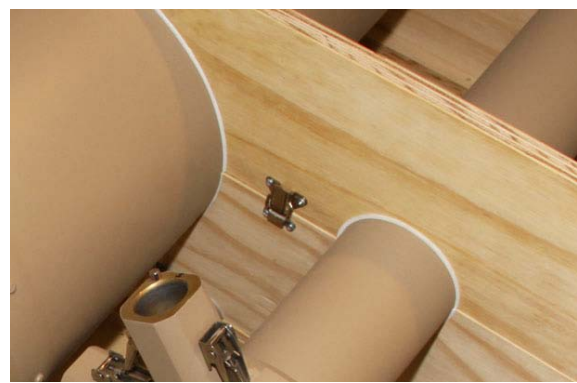

When fully assembled and erected, this Poynting antenna is 3.3m high and 2.7m in diameter

Transportation of this Poynting antenna is made in a single box, 1.6 m long, from the system integration company to its final destination

Plywood dunnage keeps the 33 individual parts securely positioned and separated to avoid scratches or damage

Fixed clips are used to latch the dunnage into the correct position. The plywood dunnage is covered with foam to protect sensitive and painted parts
