

Clip-Lok reusable and collapsible box for a remote weapon system (RWS)

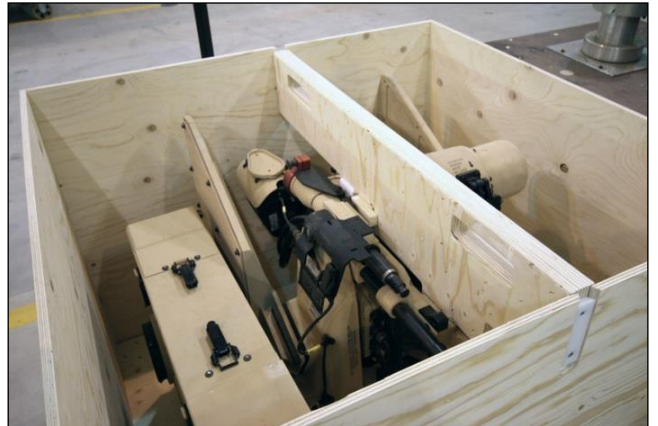

The internal support system can accommodate variations of the RWS model. This custom designed dunnage ensures a fast packing process. The RWS and all accessories can be positioned and secured on the pallet base before the box sides are built up.

Clip-Lok boxes:

- are designed for military use over rough and hostile terrain.
- are suitable for transport by road, rail, sea or air.
- have an integrated pallet base allowing 4-way handling.
- can be stacked without the need for racking.
- can be customized to withstand a pressure of up to 15 tons.
- can be easily and quickly flat-packed, reducing transport and storage volume by up to 80%.
- can be reused – typically over 100 transports with normal handling.

Strap connectors are imbedded in the base of the box.

The RWS is fully secured under transport to prevent damage to the sensitive equipment.

A unique dunnage locking system secures the RWS and stabilizes the box. Clip-Lok boxes can be painted and/or printed with item number, logo, text etc.

A fully assembled box and a flat-packed box. All dunnage is completely enclosed within the flat-packed box.
