

Clip-Lok expendable box for one-way shipments of truck windshields

The unique locking system allows safe and secure transport of a flexible number of windshields. The custom designed dunnage greatly reduces loading time compared with nailed wood boxes or crates. No additional packing materials are required. The closed box protects the glass and primer against dirt and damage.

Clip-Lok expendable boxes:

- are fully recyclable.
- are ISPM 15 approved.
- can be stacked four high in the warehouse.
- can be double stacked in the container.
- are suitable for transport by road, rail, sea or air.

This box contains a single windshield held firmly in place with a custom designed locking system. Foam base combs and corners protect the windshield edges.

An adjustable spring-loaded bolt lock secures the windshields regardless of the number of windshields being transported.

A full load of 15 windshields are held securely in place. The unique dunnage and closed box design will protect the glass and primer from damage under transport.

The box is packed and ready for shipping. The tested and proven box strength and robust spring steel clips ensure safe transport of this very heavy load.
