

Clip-Lok collapsible and limited-reusable box for automotive camshafts

This expendable box is used for a limited number of shipments of heavy, densely-packed camshafts. The box enables fast delivery of the parts and an easy packing and unpacking process. The custom designed dunnage provides excellent protection and optimum packing density.

Clip-Lok expendable boxes:

- are fully recyclable.
- are ISPM 15 approved.
- can be easily and quickly flat-packed, reducing transport and storage volume by up to 80%.
- are suitable for transport by road, rail, sea or air.

The camshaft is held securely in place between the grooved supports. The supports are slid into place as each layer of camshafts is built up. This system allows fast and easy packing and unpacking of the parts.

In this photo, all of the dunnage is in place with just one camshaft loaded to show the packing density of this custom designed packaging.

Rust-protective VCI plastic bags and sheeting help protect the parts from rust.

A fully loaded box ready for shipping and a stack of four emptied, flatpacked boxes for return shipment.
