

### Clip-Lok reusable and collapsible 2P box for petrol tank filters

Some manufacturers avoid plywood packaging for transporting sensitive items, due to the risk of dust or splinters. Clip-Lok meets this challenge by laminating the plywood surfaces with a special film. This solution makes the box ideal when cost-saving, custom designed, dust and splinter free packaging is needed.

Clip-Lok 2P boxes:

- have only two loose panels and are easy for one person to assemble and dismantle.
- have spring steel clips which are hinged on the box panels for easy handling.
- are made of certified environment-friendly plywood.
- can be stacked without the need for racking.
- can be customized to withstand a pressure of up to 15 tons.
- can be easily and quickly flat-packed, reducing transport and storage volume by up to 80%.
- can be reused - typically over 100 transports with normal handling.
- are suitable for transport by road, rail, sea or air.

This Clip-Lok 2P box has specially designed shelving to hold layers of petrol tank filters. The easy access and the removable shelving make this box ideal for Just-In-Time and in-sequence delivery and Lean manufacturing.

When the box is flat-packed, the volume is reduced to a minimum. This saves space in storage and saves costs on return transport. This is an example of a non-laminated 2P box.

The custom designed Clip-Lok box provides optimum packing density and clean, damage-free transport. There is no need for extra packaging material, so there is no waste.
