

**Clip-Lok cost-saving, reusable and collapsible 2P box for truck cabin rear wall panels**

This box is designed to carry large truck wall panels in an upright, individually hung position. This eliminates contact and friction between the panels and keeps the panels in their original form to greatly reduce the risk for damage. Direct frontal access to the panels allows ergonomic handling.

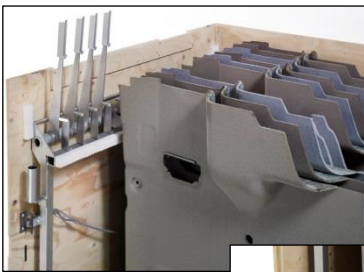

Clip-Lok 2P boxes:

- have only two loose panels and are easy for one person to assemble and dismantle.
- have spring steel clips which are hinged on the box panels for easy handling.
- can be stacked without the need for racking.
- can be customized to withstand a pressure of up to 15 tons.
- can be easily and quickly flat-packed, reducing transport and storage volume by up to 80%.
- can be reused - typically over 100 transports with normal handling.
- are suitable for transport by road, rail, sea or air.

The 2P box with the ramp down for easy access and ergonomic loading. The box is ideal for Just-In-Time and in-sequence delivery and Lean manufacturing.

A fully-loaded box with polyethylene foam inserts which help ensure damage-free transportation. Thin, yet strong box walls can give up to 10% greater filling rate.

Custom-designed dunnage carries the panels in precise position and secures them under transport.

The steel dunnage folds easily down into the void for return shipment. All dunnage is contained in the flat-packed box. Clip-Lok boxes have an integrated pallet base allowing 4-way handling.
