

Clip-Lok reusable and collapsible box for truck door extensions

The thin, yet strong box walls can give up to 10% greater filling rate. Both right and left side door extensions can be packed in the same box. The box can be loaded and unloaded from either end. The low flat-pack ratio gives reduced return shipment costs compared with steel racks.

Clip-Lok boxes:

- are ideal for Just-In-Time and in-sequence delivery.
- are an ideal solution for Lean manufacturing.
- can be stacked without the need for racking.
- can be customized to withstand a pressure of up to 15 tons.
- can be easily and quickly flat-packed, reducing transport and storage volume by up to 80%.
- can be reused - typically over 100 transports with normal handling.
- are suitable for transport by road, rail, sea or air.

There is no need for any extra packaging material. The integrated dunnage folds into the box when flat-packing. The spring steel clips are secured and hinged on the box panels.

Robust polyurethane dunnage cradles each door part to prevent damage while maximizing packing density.

The metal door parts rest on a protective felt-lined shelf. This is especially important for preventing scratches or friction marks once the parts are painted.

When the lid is placed and secured, the box will be ready for shipment. Behind the loaded box are stacked flatpacked boxes. The integrated pallet base allows 4-way handling.
