

**Product:** Clothing - working overalls  
**Country:** Scandinavia  
**Result:** Significant financial savings with reusable packaging

“The packaging system is very handy and the half-panels/sides can be removed easily when necessary, which makes it easy to pack both from the front and from the top, which gives us large savings. The maintenance costs are low, as all parts can be exchanged individually when needed”.

*Roger Samuelsson, Terminal Manager, Fristads AB*

“We wanted a stackable and effective packaging system between the workroom and our production. At the same time, the packaging should be spacious enough to avoid the clothing on the bottom getting squeezed and creased. A shelf is separating the clothes to solve this problem. We have also found that when we collapse the packaging it reduces the volume by 74%. With this, we achieve minimum stock costs in our warehouse”.

*Jens Nygard, Office Manager, Rie Design ApS*
