

Recycling

Product: Box for the recycling of fluorescent tubes.

Country: Belgium

The large pallet is only used in the collecting area. When the box is filled, it is unclipped from the large pallet and put upright on the small pallet base to be shipped to the recycler.

Normal position during transport is on the smaller 1200x1000 base, without the large pallet. Extra slots on the side panels enable them to fix the box during collection without losing clips when lid is detached.

Dimensions: 1200x1000x2000
