

## The Recycling Industry - a rapidly expanding market.

Fluorescent tubes require careful treatment

This is a satisfying market for an environmentally responsible company such as Clip-Lok. As governmental attitudes change around the world, legislation calls for more and more goods to be recycled. In Scandinavia, for instance, we are involved in the safe disposal of a variety of waste products including fluorescent tubes, paint, glass, hospital waste, electronic equipment and television tubes. Some of these are hazardous goods for which Clip-Lok has obtained the necessary UN certification. If you are faced with recycling, our experience and involvement in this area will find a safe and cost-effective way to meet your packaging requirements, however stringent.

Electronic waste in a hinged 2P Clip-Lok box

Emptying cullet glass from a Clip-Lok case

Paint is collected in a Clip-Lok container with an inner liner. UN approval obtained for 243 kg

Hospital waste in our box, which is then sterilised in an autoclave at 110C. UN approval obtained.
