

## **To whom it may concern**

Dear Sirs,

This is to confirm that Daimler Chrysler has used the Clip-Lok stillage box or 2P box in full scale operations since 2001. We have app. 30.000 Clip-Lok 2P boxes in circulation between suppliers and our assembly plant in East London, South Africa. The sizes of the boxes are between 1120x720x720mm and larger than 3000x1120x1300mm. The suppliers are primarily located in Germany, but also in other countries including South Africa. The Clip-Lok 2P boxes are primarily used for transport and storage of body panels, but they are also used for a large range of other parts.

With its hinged construction, the boxes are very easy to flat pack and erect, and the possibility of having a removable side or end provides a very good ergonomically correct working position in our factory.

We have experienced costs for service and maintenance of the boxes of app. 2% of the box value per trip, which lives up to our expectations. Due to the manner in which the parts are clipped together, it is very easy to replace damaged parts and replace these with good parts.

We are very satisfied with the 2P solution, and we are looking at expanding the application in the future.

Yours sincerely,  
Daimler Chrysler South Africa (Pty) Ltd
