TO: CLIP-LOCK SIMPACK R.C. LTD

REF: MAMMOGRAPHY PACKAGING.

Following common efforts in the new package design of the Mammography machine and after extensive testing of transport durability, I would like to emphasize the following points:

- a. The weight of the packaging was reduced by 25%.
The volume was reduced because of the internal arrangement which utilizes empty space and the mechanical strength of the partitions.
- c. Packaging time and method of fixture has been significantly reduced.
Unloading time for the technician at the hospital is reduced and the ease with which it is accomplished results in economy of staff and extra available time for machine calibration.
A noticeable improvement in transport protection and damage resistance.

This mutual effort at the production line produced excellent results, and has furnished the product with a packaging which is at once convenient, aesthetic and reliable.

We thank you for your cooperation and look forward to a continuation with future systems presently in production.

In addition, a personal thanks to Mr. Solomon Monel whose investment contributed to the successful culmination of the project.

Yours sincerely,

M. Tubul
Product Manager
