DANMARK

We have the pleasure to confirm that we have used the Clip-Lok collapsible and re-usable container system since January 1990.

Today we have in circulation 285 containers of the below 3 different sizes:

1200 x 800 x 832mm
1200 x 800 x 762mm
1356 x 1036 x 1200mm

The containers are used for transport of plastic- and metal components for microwave ovens from various sub-suppliers to our assembly plant.

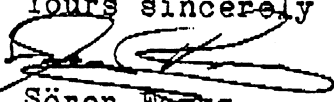

They circulate once a week and the first containers we employed have thus circulated more than 100 times, and we have not yet had to repair one single one of them - not even the pallets.

We intend to increase the use of the Clip-Lok containers when ever parts for the next generations of ovens require extra good protection.

As an extra bonus the Clip-Lok system is ergonomically very fine for the people loading and un-loading the products from the containers.

Thank you for good cooperation

Yours sincerely

Sören Forss
