

# VOLVO

We have the pleasure to confirm, that we have introduced the Clip-Lok SimPak collapsible and re-usable container system for transporting cylinder heads to our new Engine Plant in Skövde, Sweden.

We have a strict policy of not accepting wood into the production area due to problems with dust and splinters. Clip-Lok SimPak have solved this problem by using a tough, durable and washable phenol based film laminate (HDO) on their plywood.

We are very satisfied with the Clip-Lok SimPak packaging system and intend to introduce it into other areas as well in the nearer future.

Kind regards
