ParBox

Catia – 3D drawing programs

# ParBox and Catia – 3D drawing programs

---

ParBox is a great, basic design program, which provides:

1. Professional presentation of boxes to customers
2. Production drawings for basic boxes

Ever increasing security levels of MS Windows, PCs and drawing programs will in the future increase the complexity of maintaining unique programs such as ParBox.

As a consequence Clip-Lok International has decided to secure ParBox for the future by encapsulating it on its own terminal server where all partners will be given access to generate drawings on line for export to own systems.

This work will be implemented over the next 6 months

## ParBox and Catia – 3D drawing programs

---

We design the 2P boxes on Catia via a parametric model developed by Clip-Lok SimPak (Scandinavia).

During the next 12 months the parametric model will be expanded to handle all the variations of 2P designs we have seen since 2009 and hopefully we will be able to look into the future as well.

We will also in the parametric model accommodate standard boxes enabling easy export to CNC machinery via CAD CAM technology

## ParBox and Catia – 3D drawing programs

---

The updated parametric model made for Catia will be made available to all in the Clip-Lok family

Please note that the model requires the use of Catia

For those of you not having Catia, we offer to generate the drawings for 2P boxes.

Depending on complexity of the designs a development fee may be agreed upon on a case by case basis.
